Meeting notes (6/12/2022)

Each team's progress so far:
- **Users** (Alexandra/Zoya)
    - Made an overview of what functionality is needed
    - Added basic setup

- **Scheduler** (Elena/Robert)
    - Setup microservice
    - Started endpoints implementation
    - Started validation implementation

- **Events** (Sander/Xingyu)
    - Made a list of endpoints
    - Implemented *getAll* and *add* endpoints
    - Rough class structure

Everyone is okay with task distribution.
More communication is needed.
Questions about structure/interaction between microservices will be discussed after this meeting.

Boat/event relation:
- Unlimited boats, boats need to be full.
- Owner's problem if someone can join or not.
- (available positions seem unnecessary?)

We should finish all must requirements.
We should improve our assignment 1.
We should make a demo for next week.
The grading rubric will be released this week.

Gitlab issues/labels/MRs are also important for grading.
Sprints/milestones are not mandatory but can help.

The next meeting is rescheduled to 16:45
